

COMBISOL

Combisol is a universal product suitable for all types of dampening systems. It is a gum Arabic free; pH balanced fountain solution for use in both sheet-fed and web offset applications. Combisol gives very good plate protection and by virtue of its powerful wetting capability maintains an excellent ink/water balance at reduced water feed settings.

- Buffered to maintain a working pH of between 4.7 and 5.5 under most conditions
- Equally effective in hard and soft water
- Compatible with alcohol
- Contains corrosion and mould inhibitors
- Provides faster, cleaner start-ups therefore giving less paper wastage
- Prevents plate oxidation occurring during brief press stops
- Allows a thinner and more even film of dampening solution across the rollers and plate
- Reduces foaming in recirculating dampening systems

DIRECTIONS FOR USE:

Recommended starting dosages:

Soft Water - add 10-20 mls/litre of water

Hard Water - add 20-40 mls/litre of water

The optimum dosage will vary with the type of press, dampening system, water and work being printed and can only be arrived at with experience.
