

FASTAKLEEN PLATE CLEANER

Fastakleen Plate Cleaner is an acidic, emulsion plate cleaner designed to clean positive and negative presensitised aluminium plates when a stronger cleaner is required. It is especially suitable for use on baked positive plates and also for bi-metal and multi-metal plates. It will remove ink, scum and oxidation, desensitise scratches and at the same time improve the hydrophilic properties of the non-image areas. Fastakleen Plate Cleaner will provide protection during short press stops and is particularly effective as a starter for stored plates.

Avoid excessive use on unbaked plates.

DIRECTIONS FOR USE

Shake well before use. Apply directly to the plate surface using a damp sponge or wipe, applying sufficient pressure to remove any ink. Wash off with water or fountain solution before re-starting presses.
