

HYDRO IMAGE PLATE CLEANER

Hydro Image Plate Cleaner has been designed specifically for use with UV inks. Hydro Image Plate Cleaner contains chosen solvents which will easily remove wet and dry ultra violet inks without the need for abrasives. It contains a blend of acids that will ensure complete desensitisation of the non-image area and help remove calcium deposits from the plate image and gum that ensures a water receptive non-image area.

- Removes ink and oxidation quickly
- Unique blend of acids ensures a desensitised plate
- Removes calcium build up on image
- Leaves non-image area water receptive
- Effective on both UV and conventional inks
- Does not contain abrasives which can cause damage to the plate surface

DIRECTIONS FOR USE

Shake well before use.

Apply directly to the plate surface using a damp sponge or wipe, applying sufficient pressure to remove any ink.

For short-term plate storage, buff down to a thin, even film and allow to dry.
