

UNIVERSAL PLATE CLEANER

For use with Conventional /Thermal baked/ unbaked/CTP-Digitally Imaged Plates

Universal Plate Cleaner has been uniquely developed so as to be compatible with ALL plate types. Each raw material has been tested on a wide variety of plates to ensure optimum performance. Universal Plate Cleaner is a deep violet coloured emulsion, containing a blend of acids, sequestrants and solvents. This combination ensures fast ink removal, complete desensitisation and removal of calcium deposits. The violet colour helps the user to clearly see where Universal Plate Cleaner has been applied during cleaning or short-term storage.

- Stable emulsion with good ink removal.
- Protects against calcium image blinding.
- Removes severe scratches.
- Special colour helps user see application.
- Use for short term storage and general plate cleaning
- Helps attract ink to the plate image whilst attracting water to the non-image areas.
- For Conventional /Thermal baked/unbaked/CTP-Digitally Imaged plates

DIRECTIONS FOR USE

Shake well before use. Apply directly to the plate surface using a damp sponge or wipe, applying sufficient pressure to remove any ink. Wipe over with a clean damp sponge or wipe.
