

CALCIUM DEPOSIT REMOVER

An acidic cleaning solution designed to remove calcium and magnesium salts from rollers when using hard water. Calcium Deposit Remover should be used regularly when printing with untreated hard water to prevent ink-stripping and poor ink transfer through the roller train.

Calcium Deposit Remover contains highly effective corrosion inhibitors to prevent corrosion of the press.

INSTRUCTIONS FOR USE:

Wash up using conventional solvent. Apply evenly across roller train and allow to 'run in' for approximately 5 minutes. Wash off with water to remove all contaminants. This procedure should be repeated if necessary.
