

SYSTEMS CLEANER

Systems Cleaner has been developed to remove contamination from recirculating dampening systems on offset presses. When used as directed, Systems Cleaner will ensure a clean dampening system by removing algae, mould, ink and other debris from fountain system pipes, tanks and pumps. It is recommended that Systems Cleaner be used on a regular basis as part of a planned press maintenance programme.

- Loosens and removes general print debris such as paper lint, ink, etc.
- Kills and removes microorganisms such as algae and fungi.
- Contains an anti-foaming agent.

DIRECTIONS FOR USE

Shake well before use. Drain the dampening system and refill the storage tank with clean water. Add 60mls of Systems Cleaner for each litre of water in the fountain solution tank. When using warm water, circulate for at least 1 hour and when using cold water, allow to circulate for at least 2 hours. Drain the system and flush thoroughly with water to remove all traces of cleaning solution and loosened debris. Refill the dampening system with fresh fountain solution.
