

WEB COATER CONCENTRATE

Web Coater Concentrate is a concentrated silicone emulsion applied to the paper in the heat set web offset process to eliminate smearing, streaking and replaces moisture into the stock

The anti-static and surface agents present in Web Coater Concentrate help add moisture to the paper, enabling it to glide over the former board or turn bars without streaking or marking the printed surface, thereby aiding web control as well as reducing static jams.

- Highly concentrated solutions
- Eliminates smearing and streaking
- Reduces static and aids folding
- Improves print quality
- Adds moisture to web stock
- Reduces wastage
- Non-flammable
- **Available in a 60% and 30% Concentrate versions**

Although designed for use in web roller coaters it may also be spray-applied. Dilution rates may vary according to circumstances, but we recommend a starting dose of 1 part **Web Coater Concentrate 60** to 20 parts water; or 1 part **Web Coater Concentrate 30** to 10 part water.
